

Your name	Lab Name and/or Research Group	Lab/Team website	Contact email	Type of contract	Title of project (if applicable)	Funding ?	If not funded, target agencies	Few lines/info to describe the project/research to be conducted (method/requirements/...) or links to position description
Francesca Garbarini	MANIBUS Lab	https://manibushab.oxford.ac.uk/manibushab	fr.manibush@gmail.com	PhD Student	MyFirstBody	Already funded		https://doris.google.com/doris/fellowships/2023/10/16/doctoral-fellowship-oxford-manibushab
Ella Striem-Amit	Sensory and Motor Plasticity (SAMP) Lab	https://samp-lab.faschysite.georgetown.edu	es1487@georgetown.edu	PhD Student	Individual differences in plasticity in people born blind	Already funded		The SAMP lab explores brain organization and experience-dependent plasticity by studying people born blind, deaf, or without hands, using behavioral and fMRI state-of-the-art analytical techniques. The position is for a student who will work on the topic of individual differences in plasticity in people born blind. Specifically, the project will test how brain plasticity in blindness may manifest differently in different individuals, and how these differences may account for their compensatory skills and use of assistive devices.
Ella Striem-Amit	Sensory and Motor Plasticity (SAMP) Lab	https://samp-lab.faschysite.georgetown.edu	es1487@georgetown.edu	Postdoctoral position	Individual differences in plasticity in people born blind OH plasticity in people born without hands	Already funded		The SAMP lab explores brain organization and experience-dependent plasticity by studying people born blind, deaf, or without hands, using behavioral and fMRI state-of-the-art analytical techniques. This allows us to explore the general principles of how our brain represents information beyond sensory and motor specifics and how it develops and adapts based on experience. The lab has funding to support a new postdoc in studying either individual differences in plasticity in people born blind or plasticity in people born without hands. I also welcome joint fellowship/grant applications.
Valéry Legrain	Pain Research Lab	https://www.nascim.org/	valery.legrain@uclouvain.be	Postdoctoral position	Multisensory aspects of pain (normal and/or pathological)	Need to look for funding	https://nascim.be/	The specific project will be defined by the candidate and the host promoter, depending on the facilities available in the institution (somatosensory stimulation techniques [vibrotactile, thermal, electrical, etc.], psychophysics, neurophysiology (EEG, TMS), access to patients, see: https://www.nascim.org/).
Konstantina Kilezi	Somatosensation & Gargaleis Lab	https://www.kilezilab.org/	konstantina.kilezi@donders.ru.nl	Postdoctoral position	Behavioural and neuroimaging studies on human tickle perception	Already funded		We have an opening postdoctoral position at our lab at Donders Institute for Brain, Cognition and Behaviour, to work on a starting ERC project on gargaleis (tickle) perception. https://corticx.europa.eu/project/42/15103512 . The main research focus of the project concerns behavioural and neuroimaging (fMRI) studies on understanding what makes tickle ticklish. Requirements: • A PhD in the field of Neuroscience, Psychology, Cognitive Science, Biomedical Sciences, Engineering, or a related field. • Experience in collecting and analysing psychophysical, physiological, behavioural and fMRI data. • Experience with, or interest in, statistical and computational modelling. • Passion for research, curiosity, and ability to work independently. Candidates will contribute to all steps of the research from literature review to implementation of study design, data collection, data analysis and preparation of manuscripts. The position is available for 1 year with the possibility for continuation for 2 more years. Come to work with us!
Patrick Bruns	BFN Lab, University of Hamburg (Dirigite Roder)	www.bfn.uni-hamburg.de	patrick.bruns@uni-hamburg.de	PhD Student	Multisensory processing and age-dependent neuroplasticity	Already funded		We seek a PhD candidate with a Master (or equivalent) degree in Psychology, Cognitive Neuroscience, Cognitive Science, or a related field. The successful candidate has a strong background in experimental psychology and statistics. Prior experience with neuroscience methods such as EEG, fMRI and cognitive modeling or with conducting research in children is of advantage. Ideally the candidate has basic programming skills.
Giulia Liberati	Liberati Lab	https://www.nascim.org/abd/Giulia.Liberati	giulia.liberati@uclouvain.be	PhD Student	PhD position on the neural basis of thermoreception	Already funded		https://uclouvain.be/fr/instituts/recherche/jobs/jobs.html
Salvador Soto-Faraco	Multisensory Research Group (MRG)	https://www.ucl.ac.uk/web/mrg	patmela.miller@ucl.ac.uk	Postdoctoral position	Neural basis of thermoreception	Need to look for funding	Horizon Europe MSCA Postdoctoral Fellowships 2023	https://www.europa.eu/europa/en/jobs/shortlisting/shortlisting-mcsa-postdoctoral-fellowships-candidates-cognitive-science-and-philosophy
Monica Gori	"U-VIP" (Unit for Visually Impaired People)	https://www.ucl.ac.uk/web/ucl/vip	monica.gori@ucl.ac.uk	Postdoctoral position	Multisensory processing in mental disorder and motor deficits	Already funded		https://ucl.ac.uk/web/ucl/vip
Michela Bassolino	Institute of Health, University of Applied Sciences of Western Switzerland (HES-SO Valais Wallis)	https://www.hes-so.ch/research-and-innovation/perception-cognition/multisensory-processes/michela-bassolino/?lang=en	michela.bassolino@hevs.ch	PhD Student	Hand in hand: revealing the link between distorted hand perceptions and efficient manual actions	Already funded		https://www.hes-so.ch/en/jobcloud/abd-doctoral-candidate-2025/501
Monica Gori	Unit for Visually Impaired People (UVIP)	https://ucl.ac.uk/web/ucl/vip	monica.gori@ucl.ac.uk	Postdoctoral position	Cortical mechanisms of spatial representation in children with and without visual impairment	Already funded		https://ucl.ac.uk/web/ucl/vip
Robert Volcic	Volcic lab at New York University Abu Dhabi	volcic.github.io	robert.volcic@nyu.edu	Postdoctoral position	Vision and haptics in action	Already funded		Our lab thus tries to bridge the research fields of multisensory perception and perception and action to understand the role vision and haptics (touch and proprioception) play in perceiving spatial properties of objects and their arrangement in the world, how these senses are used to guide prehension movements (reaching and grasping), and, how active motor behavior, in turn, affects sensory processing. To investigate these topics my research program leverages a wide range of experimental and methodological tools, including psychophysics, behavioral techniques, movement tracking, computational modeling, virtual reality (VR), and Bayesian statistics. The Coen lab is a new systems neuroscience group at University College London. We work with mice, using high-density Neuropixels probes for recording and optogenetic approaches for perturbations. Projects using these techniques can be flexible within the overarching theme of audiovisual integration. If you would like to hear more about our work, please come to my symposium talk on Wednesday, June 28th at ~3pm. It is highly desirable for postdoctoral fellows to have prior experience in electrophysiology or mouse stereotaxic surgery, and be comfortable with large-scale data analysis.
Philp (Pip) Coen	The Coen Lab	https://coen-lab.com/	p.coen@ucl.ac.uk	Postdoctoral position	Mapping audiovisual integration across learning, circuits, and behaviours	Already funded		The job advertisement is currently live and the closing date for applications is 17-Jul-2023: https://www.ucl.ac.uk/work-at-ucl/search-ucb-jobs/details?nfostringid=5184&nfostringid=11637&id=Q1K70026203F3V9QBIL08M8M07&L=UK&languageSelect=UK&mask=vet
Jared Medina	Medina Lab - Emory University	www.jaredmedina.com	jared.medina@gmail.com	Postdoctoral position		Already funded		Our lab will be working on two major projects: Using fMRI to understand sensorimotor plasticity after stroke, and using illusions, psychophysics and TMS to understand touch, multisensory integration and the body. Informal enquiries are welcome.
Jared Medina	Medina Lab - Emory University	www.jaredmedina.com	jared.medina@gmail.com	PhD Student		Already funded		Our lab will be working on two major projects: Using fMRI to understand sensorimotor plasticity after stroke, and using illusions, psychophysics and TMS to understand touch, multisensory integration and the body. Informal enquiries are welcome.
Jared Medina	Medina Lab - Emory University	www.jaredmedina.com	jared.medina@gmail.com	Research assistant		Already funded		Our lab will be working on two major projects: Using fMRI to understand sensorimotor plasticity after stroke, and using illusions, psychophysics and TMS to understand touch, multisensory integration and the body. Informal enquiries are welcome.
Lihan Chen	Multisensory lab at Peking University, Beijing	http://psy.pku.edu.cn/english/people/faculty/associate_professor/lihanchen/index.htm	chli@pku.edu.cn	Postdoctoral position	Neural mechanisms for multisensory integration	Already funded		The candidate should have background in neuroimaging with doctoral degree in psychology, neuroscience or biomedical engineering, with appropriate skills in Matlab programming. Two reference letters are needed for applying the position.
